DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 3/7/08, with respect to the rejection(s) of claim(s) in the prior office action have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of United States Patent Application Publication 2003/0141807 to Kawase.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-19 are rejected under 35 U.S.C. 102(e) as being anticipated by United States Patent Application Publication 2003/0141807 to Kawase.

Kawase discloses in figures 7-8, an active matrix display and method of making comprising:

- An array of pixels (paragraph 75) provided over a common substrate (4), each pixel comprising a display element (2) and a switching device (each transistor is controlled and switched to turn on accordingly) and the array of pixels defining a display area and the pixels being formed from a plurality of thin film layers (thin film transistors TFTs disclosed);
- Column driver circuitry (16);

- Row driver circuitry (20);
- Wherein the display further comprises at least one conductor line (depending on length, the conductor lines, such as 16 extend to a distal edge) extending along an edge of the display over the common substrate and outside the display area.

As to claims 2 and 5-7, an integrated circuit is provided on a flexible printed circuit.

As to claim 3, the row and column drivers are disclosed as claimed.

As to claim 4, the conductor line (10) is parallel to a side edge of the display.

As to claim 8, at least one conductor line is formed over a support defined by the TFT (figure 1).

As to claim 9, the line is on a printed circuit board.

As to claim 10, a power supply line would be inherent to power the TFTs.

As to claim 11, a TFT would have a capacitance portion.

As to claim 18-19, the column and row driver conductors overlap.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. United States Patent Application Publication 2005/0225690.
- b. United States Patent Application Publication 2003/0076451.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
